

CUSTOMER CASE STUDY – EDUCATION

The Customer | **University of Houston-Downtown** is a public institution in downtown Houston. Located in the heart of the city, UHD is a comprehensive four-year university that provides strong academic opportunities & career preparation. UHD staff is dedicated to integrating teaching, service & scholarly research to develop students' talents & prepare them for success in a dynamic global society.

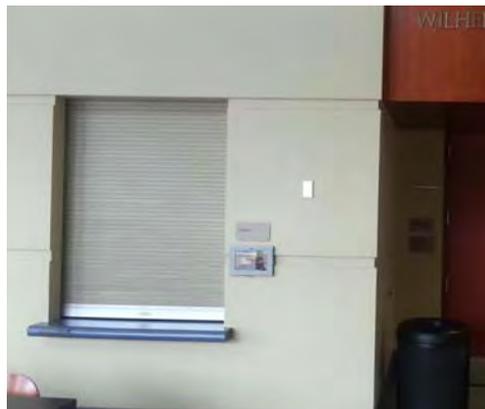

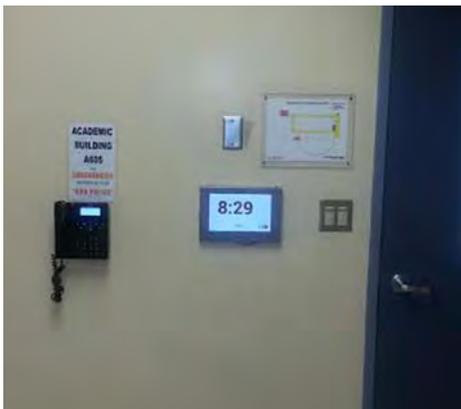

The Challenge | UHD wanted to keep their newly purchased Samsung Android Tablets safe by enclosing them in tamper-proof security solutions to avoid any theft. They wanted the 200 tablets to blend into the student environment, and stay where they belong in all the different settings. They needed these tablets to be set up throughout the classrooms next to the exit doors, in the special events conference rooms, and in the entrance to their auditoriums.

The Solution | **The Galaxy Tab Enclosure** and **the Space Galaxy Tab Enclosure Wall Mount** safely protect UHD's Android Tablets in the public settings of the University. Both enclosures are made out of high grade aluminum, offer uninterrupted wireless connections, and can accommodate any universal cable lock using a built in security slot. The Galaxy Tab Enclosure accommodates the Galaxy Tab1/Tab2 and the Galaxy Note 10.1, and is available in black and silver. The Space Enclosure for Galaxy Tab Kiosk is available in a variety of colors, and has open corners for proper ventilation and access to the audio and charging ports for continuous charging.

Customer Feedback

"Thanks to these well-made Maclocks enclosures, we have not experienced any thefts, and we have over 200 units installed in public areas (classrooms & meeting rooms). We made sure to purchase the enclosures at the same time as the tablets. These enclosures are noticeably made with solid engineering."

CUSTOMER CASE STUDY – APPLICATION AND EDUCATION

The Customer | **Aridan Books, Inc.** is an innovative publishing company with a primary focus on childhood education and development through interactive applications. Their trademarked and patented Crayon Kiosk iPad stand allows for up to four children to sit and enjoy educational applications simultaneously. These education stations are being utilized at many libraries, Pre-K centers, and childhood waiting areas in dentists and doctors' offices throughout America and Canada.

The Challenge | They needed a way to keep the iPads securely mounted onto the Crayon Station, yet attractively displayed in a way that prevented children from exiting out of the application. Most important was that it be durable and sturdy, and that it has a rotational feature from portrait to landscape. Also that the cables and wires not be visible or accessible to the kids. These brightly-colored stands are customizable to order, so they wanted the option of different iPad enclosures.

The Solution | **Maclocks Executive iPad Enclosure** and **the Space Case** are two enclosures that fit all the needs for the Crayon Kiosk. Both secure iPads 2/3/4/Air, and are made of high grade aluminum which makes them completely tamper resistant. The Executive enclosure easily mounts to any flat surface. It offers a 90 degree rotation in each direction, and is perfect for those who want the option of portrait and landscape. The iPad Space Enclosure can accommodate a cable lock or be mounted flush on the wall. The case can easily block the home, volume and power buttons while completely keeping the cables hidden.

Customer Feedback

"The Crayon Kiosk & Maclocks both see safety as an important issue for kids using an iPad. Maclocks durable and safe enclosures have allowed educators, librarians & business owners to sit back & relax while their iPads are enjoyed by thousands of tiny little hands."
